

a

Air conditioning eats its own benefit

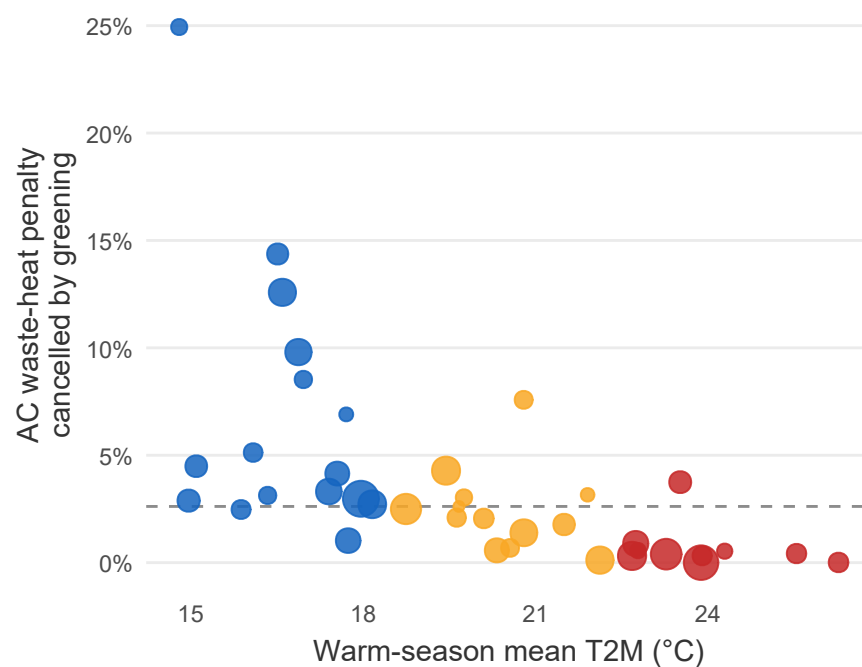

Gross cooling benefit lost to AC's waste heat
+3.2 pp per °C ($R^2 = 0.35$)

b

Greening offsets little of it

Penalty cancelled by adding trees; median 2.6%,
and near zero exactly where the penalty is largest

Climate cluster ● Hot ● Temperate ● Cool

c

The levers overlap, but only mildly

Greening loses a median 7.6% of its benefit
once AC is already deployed
